What are the differences between Seasoned Advice, Anime Sushi, and Stack Overflow? It seems that there are a number of discussions about these 3 StackExchange sites, and it is not always clear what are the similarities and differences. It seems that the three websites are looking for similar users, topics and questions, but the aims are different. Please clarify for me the differences between the following: I see many users asking for help on many topics from all three sites. Some people ask help about programming on StackOverflow and some users ask help about anime on AnimeSushi. Is that the same? I also see many programming questions on AnimeSushi. Is that the same? Is there overlap between the anime and programming forums? Are all programming questions on AnimeSushi allowed? Is all AnimeSushi programming related questions allowed? How should one proceed if he has a programming question but posted it on AnimeSushi? A: SE is an extensive network with many different sites (over 300) with many different topics. These topics, their rules, their users are different. Not all of these sites are programming specific, many of them allow questions on English and other topics as well. In fact, SE is designed for a vast topic scope with users of all types. What does that mean for you? We do not try to categorize the entire internet, not even our own network. If you have a programming question and asked it on this site, but it is considered outside of the scope of this site, your question will probably be closed. If you have a question that is not programming related, it will not be closed even if you posted it on a site that is more programming specific. Programming on the other hand is often closely linked with anime/manga, but it does not mean that you should only post on Anime & Manga. To summarize: No, it's not the same, that's the scope of our sites I don't know, ask on an existing site if you think it's not fitting The Greek refugee crisis is seen by the EU as a test to see if European leaders can curb the EU's open borders policy.
