The Wardrobe is a casual game that you can play in your spare time. Don't let the simple plot and gameplay deter you from spending some time playing this interesting puzzle-centric game. Online multiplayer is supported, but it's disabled by default. The Wardrobe is all about going into the wardrobe and solving puzzles that are hidden there. You play as a skeleton in a fantasy world. This skeleton gets into trouble as he decides to go into the world of the living, who have a fear of skeletons. The first thing you're asked to do is figure out how the skeleton got in the wardrobe in the first place. It turns out that there is a skeleton living there, right in your bedroom. You only have to get the skeleton out of the wardrobe. While playing this game, you can interact with objects, enter the wardrobe, and be notified about the skeleton. In this game, you have to move the skeleton to the correct place. What makes The Wardrobe a fun game is that there are lots of traps and challenges along the way, which really make the puzzle part of the game interesting. The main plot of this game is very simple, but the game has lots of hidden secrets to keep you amused.Q: Out of memory exception in JConsole I have a java agent that resides in my JBoss AS 7 server. I had my memory set to 16 MB, and then when I was using it I realized there was a memory leak, so I increased it to a bit more than that to around 30 MB. The agent works fine, but when the server runs out of memory on the thread in which I am running the agent, the server exits with: java.lang.OutOfMemoryError: Java heap space How can I fix this? Is there some config in the JBoss that I'm missing, or maybe a classpath variable that I don't know about? A: I 1cb139a0ed
