## PhotoProjector Plus Full Version

Description: PhotoProjector is a fast, reliable and easy tool for creating multiple virtual viewpoints of a 3D scene and its projection onto a flat surface or a virtual projection board with lighting. This program lets you create interlaced images with the shortest exposure for the entire process. PhotoProjector is designed for combined use with other graphic programs such as Adobe Photoshop, Bas-relief, ViewsAligner, StereomorpherPlus etc. PhotoProjector doesn't create the viewpoints of 3D scene or animation images. This program creates interlaced images only. Formats of input files are BMP, PNG, TIFF, JPEG in Greyscale, RGB colour mode, TIFF in CMYK colour mode. Formats of output files are TIFF in colour mode of source images. Don't support multilayered TIFF. Resulting file size limitation is 2 GB. Pixel size limitation depends on the file compression degree: the more compression, the more size. You can choose several TIFF compression - LZW, GZIP, Packbits. This compression does not worsen the image quality. For example, JPEG-compression worsens noticeably the image quality, but LZW, GZIP, Packbits do not give the observable deterioration. Get PhotoProjector Plus and take it for a test run to see what it's really capable of! PhotoProjector Plus is a fast, reliable and easy tool for creating multiple virtual viewpoints of a 3D scene and its projection onto a flat surface or a virtual projection board with lighting. This program lets you create interlaced images with the shortest exposure for the entire process.
