SE Customization Editor is a handy application that you can use to enhance the functionality of your Sony Ericsson mobile phone. All the options are comprised within a single window and therefore, the interface might seem a bit crowded. The connected phone is automatically detected and the application displays its model. There are a series of actions that can be performed in order to customize the mobile device. For instance, you can easily assign a name to the phone, as well as copy, move or delete internal system files, which otherwise cannot be accessed. However, since this type of files are highly sensitive, you are advised to avoid such modifications, which might result in making the phone inoperable. SE Customization Editor can also modify the phone activity menu layout, from vertical to horizontal and viceversa. New languages can also be added to the phone by simply entering the desired language codes, provided the corresponding.LNG and.T9 files are already installed on the mobile device. The camera silence properties can also be customized, since you can easily mute the shutter sound when the 'Silent' sound profile is activated or set the device to always play the shutter sound, no matter the selected sound profile. In addition to this, the FOTA firmware update service can be disabled or enabled with a single click. Disabling this service means that your device will not receive automatic firmware updates anymore and any future update will require visiting a specific service center. Modifying the digital rights management settings is another operation that you can perform using SE Customization Editor. The application can drop support for playing MP3 and AAC files, as well as remove these two types of files from the range of supported ringtone formats.
