Love this product and find it to be the best postproduction software. I really love the new feature of Adobe Capture One Pro. Although I still need to download and install the update. However, the new feature is a very welcome addition for those who want a tool that can be controlled with a mouse. I haven't tried the new live-layers features.

Love the review and the nice formatting! It has been my lifelong dream to try the new Adobe product and I am very excited about this! I will begin using it as a replacement for Photoshop CS5. I have been using Corel for years and find the interface a bit disorganized. It's time to upgrade and try a more streamlined workflow. While lightroom plays nicely with other suite of products, I prefer the flexibility photoshop offers. I have 2 1TB HDs and have been feeding my arsenal with various RAW files, processing them in Photoshop and incorporating them into a photo book on the fly. I really like the fact that I can have a duplicated track for the images in a photo book, access them in a Monte Carlo workflow with Lightroom in my PC and then refine all of the steps at my book printing house. Wow. I am thrilled to have heard about this new update to Photoshop. It's a dream come true. I would love to see an updated version of Lightroom and I am really looking forward to seeing the new release. This is the Darkroom Updates channel.
